+1 (770) 884-1001

Visionary AI and Technology Executive combining deep architectural expertise in frontier AI systems with a decade of experience steering global digital transformations for Fortune 500 enterprises. Proven track record of scaling distributed delivery organizations (1500+ team members), managing substantial P&L, and cultivating high-level executive partnerships. Uniquely bridges enterprise consulting acumen with cutting-edge systems architecture—most recently pioneering secure, edge-native distributed mesh networks for decentralized AI inference. Seeking a C-level or Executive Director role to leverage this intersection of enterprise strategy, team scaling, and advanced distributed computing to guide a forward-thinking organization through the next era of AI-driven growth.

Founder – Stealth AI Startup (2024 - 2026)

- **Architected and spearheaded the product vision** for a decentralized AI mesh network, designing zero-trust infrastructure that fundamentally reduces LLM inference costs and ensures strict data privacy for enterprise B2B clients.
- **Engineered robust edge-native protocols** and workload distribution paradigms, successfully enabling the secure execution of frontier AI models (14B+ parameters) directly on consumer hardware via advanced P2P networking.
- **Positioned highly distributed systems** as a scalable, cost-effective alternative to traditional centralized cloud AI platforms, driving the end-to-end strategy from initial ideation to cross-platform deployment.

Software Release Manager – treXis (2023 - 2024)

Architected and standardized enterprise release frameworks and Target Operating Models (TOM) for a rapidly scaling Fintech startup. Acted as a strategic advisor bridging executive stakeholders and engineering teams to align complex deployment architectures with critical business objectives and quality attributes.

Associate Partner, Digital Transformation Consulting, Estee Lauder – Wipro (2022 - 2023)

Spearheaded organizational scaling and enterprise architecture strategy, building and leading diverse, global teams of 1500+ members. Designed operating models centered on Data & Insights and Enterprise Automation, transforming legacy support structures into mature, high-velocity delivery organizations.

Head of Centre of Excellence – Root Evolution (2020 - 2021)

Established and directed an Enterprise Centre of Excellence (CoE), defining architectural governance and operational best practices to drive large-scale product adoption. Acted as the primary strategic advisor for high-stakes customer engagements, bridging technical operations with executive business goals to streamline service delivery and resolve complex systems escalations.

Associate Partner, Digital Strategy and Interaction Design – IBM (2019 - 2020)

Advised C-suite stakeholders at premier financial institutions on foundational infrastructure modernization and digital strategy. Architected transformation roadmaps that transitioned legacy monoliths into scalable cloud architectures (IBM Cloud, CRM integrations), laying the necessary technological groundwork for future data and automation initiatives.

Client Partner, Practice Lead – Capgemini (2017 - 2019)

Designed and scaled a net-new consulting practice from 0 to 100+ employees in six months, holding full P&L responsibility. Championed architectural modernization (AWS/Azure migrations) for global institutions like Royal Bank of Canada and State Farm, driving a 40% increase in sales through strategic technical advisory and enterprise-scale solutions.

Atlanta, GA, USA

Client Partner – Backbase (2014 - 2017)

Drove explosive 125% YoY revenue growth in Professional Services by leveraging deep technical consulting expertise to align client architectures with strategic business outcomes. Designed and executed a highly optimized, international resource strategy for a 50+ person global delivery organization. Fostered immense client trust and retention (50% YoY increase in repeat contracts) by successfully architecting and delivering complex solutions for 10 enterprise clients across 3 countries.

Software Architect – The Weather Channel (2011 - 2014)

Architected and modernized high-throughput, distributed delivery systems capable of handling massive national traffic at scale. Spearheaded the engineering lifecycle for best-in-class digital products, driving innovation that directly culminated in a uniquely engineered, patent-awarded technology architecture.

Senior Web Developer - Turner Broadcasting System (2006 - 2011)

Engineered scalable delivery architectures for highly trafficked digital platforms. Transitioned rapidly into engineering leadership, directing a specialized quality assurance team. Pioneered operational standards and rigorous testing frameworks that became the baseline for technical best practices within the division.

Education - B.S, Management, Indiana University

Core Competencies - Artificial Intelligence Strategy, Distributed Systems Architecture, P&L & Revenue Management, Enterprise Target Operating Models (TOM), Large Language Models (LLMs), Machine Learning Infrastructure, Edge Computing, Go-To-Market (GTM) Strategy, Global Team Scaling (1500+).
